

CHAMPAGNE

VIGNERONS DEPUIS 1660

SENSITIVE TO SUSTAINABLE DEVELOPMENT AND THE ENVIRONMENT WITH: 

We have chosen to have a vineyard rooted in a personal approach that is more respectful of our environment planet, to have a viticulture that is part of a global plan of actions aimed at respecting Mankind.

Here are the main applications within our Champagne House.

1/For 30 years, manure has been produced from manure composting and wood bark. The supply of these materials are local, within a 25 km radius.

2/The entire surface is mechanically ploughed, no herbicides have been used for 10 years. These interventions represent a significant increase in work and investment in equipment.

3/Sulphur and copper are natural materials that help us to fight vine diseases such as powdery mildew and mildew. Sexual confusion is used to control pests.

4/For the purpose of carrying out our approach, we have set up prophylactic measures within our company vineyard and deploy more human resources. Green stripping to remove inputs.

5/In the cellar, we make sure that our wines are vinified simply for a better authenticity. For example, the use of sulphites remains moderate (70 mg per litre on average).

6/Systematic recycling of wine by-products. Discharge limitation and treatment system in stations specific to wastewater.

7/Selective sorting of consumables and packaging.

8/New premises with high-performance insulation and thermal regulation with a heat pump. A part of it is heated with wood that consumes renewable energy.

9/Position of a message on champagne boxes encouraging selective sorting of cardboard and glass. A Champagne bottle can be made of more than 90% recycled glass, using bottles lightweight glass 5-40 gr. We also take care to avoid overpacking.

10/We place the Human being at the centre of the company.

Do not hesitate to send us your comments, it is with pleasure that we will discuss our approach.
